This is the model that we had at the end of last meeting

In the following slide, we have a completed model using the information available in the excel file.

PLEASE ANIMATE, to go step by step having Reef fishes as the central node.

Dotted lines are relationships that were not identified during our last meeting but perhaps it will be worth thinking about it.

There are no differences between red and blue lines...I just used different colors because it was getting confusing.

Numbers indicate the strength of the relationship

Elements inside purple circle are those that we said are related to other sub models. If there is time to discuss it...perhaps we can think of others (e.g. reef fishes).
